DISASTER INTERVENTION • ENVIRONMENTAL EMERGENCIES • PUBLIC SAFETY

AMPHIBEX INTERVENTION

30 years of Expertise and Innovation

Normrock Industries puts its know-how to work by creating the very first intervention package for its fleet of AMPHIBEX machinery. Mobile on water and on land, in addition to offering unequalled versatility, the AE INTERVENTION is a must for all coastal and riverside cities.

Multi-functional, Efficient, and Easy to transport.

Every engineering detail that goes into the design of AMPHIBEX makes it an indispensable tool for crisis situations. With its versatile mechanical arm and phenomenal pumping capacity, the INTERVENTION PACK provides a high-performance and accessible resource when it is needed most.

Created for critical situations

In addition to all its usual functions, the INTERVENTION PACK provides AMPHIBEX with all the additional equipment necessary for rescue operations. A state-of-the-art navigation system, a set of flashing beacons and rescue lights, lifeboats and a complete range of specially designed accessories.

Disaster Intervention

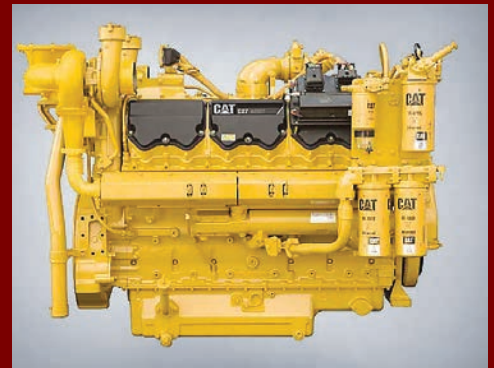

The AE INTERVENTION is a remarkable machine to act following a natural disaster. Whether it is for clean-up operations, to de-clutter dangerous debris, or for search and rescue operations, the AMPHIBEX is an ideal multi-functional machine. Its amphibious capacity also allows it to be at its best even in a partially or completely flooded area.

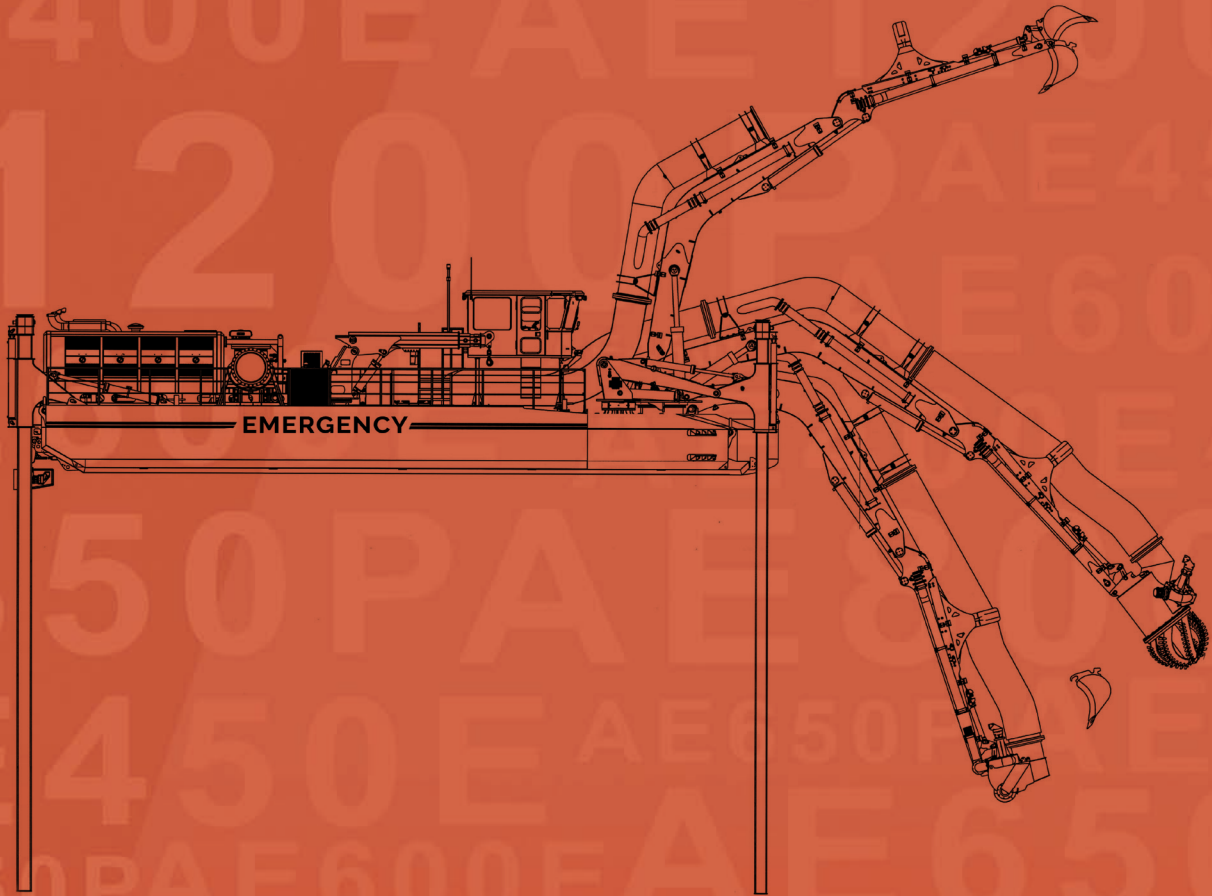

Environmental Emergencies

Having proven itself for several decades as an environmental technology, AMPHIBEX is already used all over the world for decontamination operations, invasive species management, prevention, and sampling for analysis. In addition, everything is designed to be in close harmony with nature, from biodegradable hydraulic oil to carbon-reduced manufacturing.

Public Safety

Being an essential tool for cities in anticipation of disasters, AMPHIBEX can also be used for all kinds of maritime and riparian operations. The equipment and versatility of the AE INTERVENTION make it both an emergency vehicle and a service vehicle for public works. Use it to maintain waterways, pass underwater cables, pump water for fire departments or control floods and sewer overflows in urban and semi-urban environments.

AMPHIBEX INTERVENTION

The **INTERVENTION** pack can be designed and customized for each of the different models of the AMPHIBEX fleet. Depending on the particular needs to which your environment exposes you, ask our team to design the ideal set of equipment for your **AE INTERVENTION**.
